

2. Put the black plastic top and bottom piece onto the top and bottom pipe.

3. Connect each belt with a clip lock with a belt without a clip lock. Please make sure that the loops are at the end of the belts and not at the clip locks. Like this you get four tensioning belts. Put the **small loops** of the

tensioning belts underneath the disk of the sand anchors.

4. To set the position of the sand anchors, lay down one net post at the extension of the upper tensioning rope of the net. Now place the second net post at the end of the

first one in a 90° angle. The end of this net post marks the first position for a sand anchor. Repeat this procedure to find the other positions. Altogether you

get four positions for the sand anchors to fix the net posts. At last hammer the sand anchors into the sand at a pointed angle.

5. Put the big loops of the tensioning belts around the top end of the net post and put up the post sloping. Now place the KEVLAR rope and the white upper

tensioning rope of the net also around the top of the post.

6. Tighten the four tensioning belts evenly and like this put up the net posts vertically.

7. Hang the lower tensioning ropes with the black hooks into the belt claspings. The length of the tensioning ropes can be varied by knots.

8. The ideal net position can be reached by adjusting the tensioning belts and the lower tensioning ropes of the net. The net should be centred between the two net posts.

And now? Have fun playing!

## >>> Installation Instructions Beach Champ-Set

1. Each net post contains of three pipes. The pipe with the FUNTEC sticker is the middle piece.
